PROJECTS

- **Computer Store Information System (SIT'TOK)
State Polytechnic of Jember**
Develop a comprehensive web and Android-based store management application, featuring a responsive and user-friendly UI for a smartphone sales website. Utilize the Laravel framework to create the SIT'TOK computer store interface, design a robust management system encompassing database management, system structure, and key feature integration, and implement a dynamic data visualization dashboard that displays computer sales information through interactive graphs.
- **Calorie Counting (Isi Piringku)
CV. Esolusindo**
Develop an innovative Android application for calorie counting, medication reminders, and nutritional content tracking. This project involves designing a seamless application flow, creating an engaging app interface using Figma, and building the application with Flutter to ensure a smooth user experience.
- **Learning Media Applications (Zatify)**
Create an engaging three-dimensional Android learning application for elementary school students. This project involves designing an interactive and educational system flow, crafting an appealing and user-friendly interface with Figma, developing the application using Unity, and maintaining high-quality standards throughout the development process.
- **Learning Media Applications (Learn)**
Develop an innovative three-dimensional Augmented Reality (AR) application for learning English. This project focuses on designing a cutting-edge system flow, creating an engaging user experience with Figma, building the application for Android using Unity, and ensuring top-notch quality for an optimal user experience.
- **Learning Media Applications (Story Art)**
Create an engaging Android application for cultural arts education aimed at junior high school students. This project involves designing an interactive and educational application flow, crafting a delightful user interface using Figma, developing the app with Unity, and ensuring it meets high educational quality standards.
- **Learning Media Applications (Tranzy)**
Develop an educational Android application for introducing children to various modes of transportation. This project focuses on designing an intuitive and informative system flow, creating an engaging UI/UX with Figma, building the application using Unity, and ensuring both quality and stability for a seamless learning experience.
- **Learning Media Applications (Netwize)**
Create an engaging Android application designed to introduce elementary school students to computer networks. This project will involve crafting an interactive and educational system flow, designing a user-friendly interface with Figma, developing the application using Unity, and ensuring high-quality standards for an optimal learning experience.
